My Css Is Easy I

| | |
|-------------------|------------------------|
| Technical details | |
| Submit files | index.html - style.css |

Create a html page (named: `index.html`) with a css style (named: `style.css`).

It is require to use `flexbox`. If you use any `float`, this exercise will be consider as failed.

Flexbox are very powerful in order to align `responsively` elements

Your web page will be `responsive`, which means your page will handle a `mobile` view and a desktop `view`.

Mobile view:

[Looking for a group](#)

```

-----
|  HEADER  |
-----
|  HERO    |
-----
|  CONTENT |
-----
|  SIDEBAR |
-----
|  FOOTER  |
-----

```

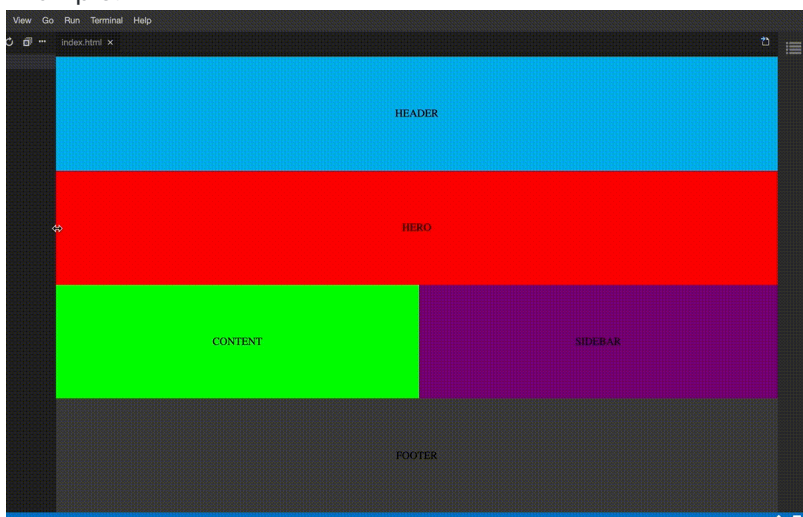

Desktop view:

```

-----
|          HEADER          |
-----
|          HERO            |
-----
|  CONTENT  |  SIDEBAR  |
-----
|          FOOTER          |
-----

```

Example:

Each section will have their names displayed (ex: in the header component you will have the word `header`, hero for hero, etc.)

Use some padding to make it smooth.

Header will have a background color: 00B7EB

Hero will have a background color: FF0000
Content will have a background color: 00FF00
Sidebar will have a background color: 800080
Footer will have a background color: 444444

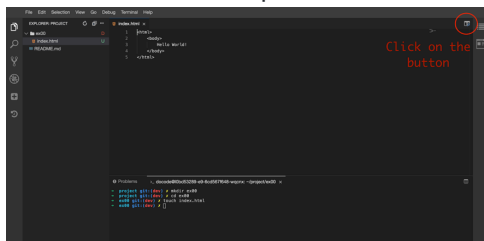

Annex: Static Html Page Renderer

How to have a `static html page renderer` inside Docode:

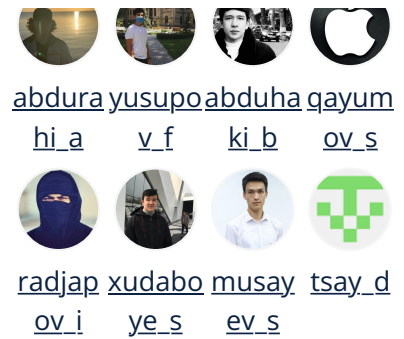

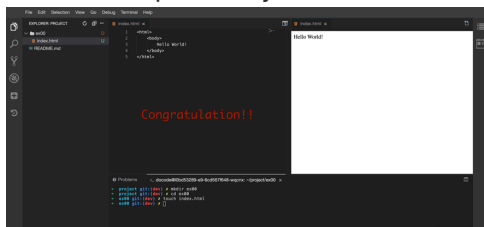

0# Open your HTML file:

1# Click on the web preview button:

2# You can preview your html:
